

KAOTICA HAS REDEFINED THE RECORDING SPACE

FOR YEARS AND YEARS THE ONLY WAY TO CAPTURE A GREAT SOUNDING VOCAL PERFORMANCE WAS TO WALK INTO A PROFESSIONAL SOUND BOOTH... NOT ANYMORE.

INTRODUCING THE KAOTICA EYEBALL

We looked beyond the traditional methods of acoustically controlling the space around where artists record and shifted our focus toward the two most important elements in the vocal recording process; capturing the pure tonality of your voice and the nuance of the microphone recording it. Think of it as a vocal booth that fits right over your microphone, sets up in seconds and instantly transforms any space into a recording studio.

We developed the Eyeball as a solution for artists, eliminating the need to treat their recording space with expensive acoustic materials in order to achieve professional results. By greatly reducing unwanted room reflections and ambient noise, now musicians, voice over talent, engineers and producers can capture studio quality recordings working in their own space.

eyeball[™] by Kaotica[™]

The perfect solution for the modern recording artist

MUSICIANS

Capture consistent studio quality tracks, whether working in your home studio or out on the road recording in your hotel room, backstage or on the bus

STUDIO ENGINEERS

Achieve collaborative flexibility and the recording consistency when your artists send tracks back to the studio for mixing

VOICE OVER TALENT

Pack the Eyeball on your travels and capture studio quality tracks for your demos and have the competitive advantage that wins you the job

A&R EXECS

Get the consistency of vocal performances for your artists who are shuttling between multiple producers, engineers and various recording studios
